

Sosa designed by Piotr Kuchciński – is a modular system of soft sofas which stuns with its exquisitely refined proportions. Despite its physically tangible weight, large dimensions and strongly contoured shapes, Sosa comes across as an incredibly light and sleek piece of furniture, almost levitating above the floor.

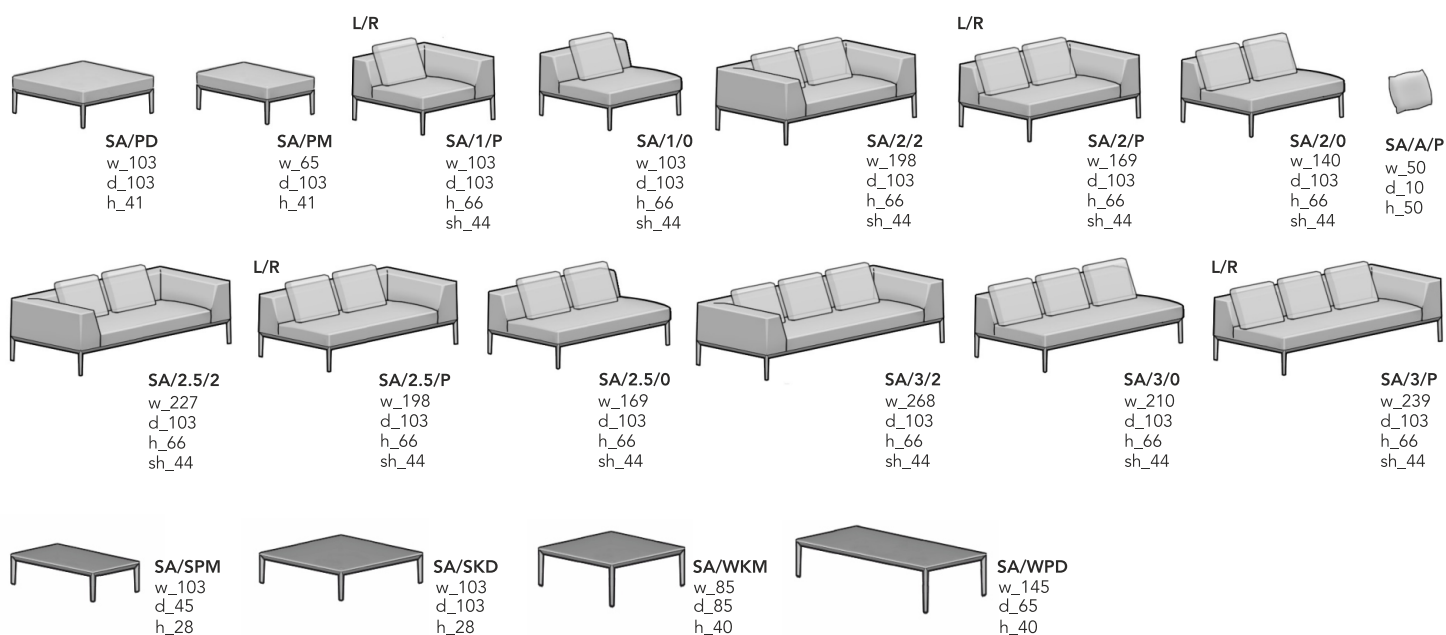

Sosa is elevated quite high, resting on long slender legs. The effect was achieved through the use of a technologically advanced load-bearing frame which combines slenderness and subtle cross-sections with an incredible span and stability.

Although not very thick, the seat and backrest elements are exceptionally soft and comfortable. The meticulously finished joint between the legs and the upholstered frame supplies the sofa with a statement detail.

Sosa can be seen as a piece of furniture with multiple personalities. Users are free to choose their preferred style by selecting the type of leg finishing

(natural wood or painted according to the available colors, coated or chrome-plated steel) and fabric. Sosa can be natural, rustic, vigorous, monochromatic, opulent... the choice is yours.

The Sosa family consists of 1-, 2-, 2.5- and 3-seater sofa modules in a variety of configurations – without armrests, asymmetrically designed with a single armrest or traditional, featuring two armrests – and hassocks. The multitude of elements offers virtually unlimited interior arrangement possibilities. The collection is complemented by rectangular coffee tables with a universal design, equipped with wooden tops and available in four different sizes.
